

Figure 3-18. Higher magnification of Figure 3-17 to show parasitophorous vacuole and sporozoite ultra-structure. (x 16800)

Figure 3-19. Sporozoite in villous epithelial cell near
villar lamina propria at 6 hours post
infection. (x 4800)

Figure 3-20. Higher magnification of Figure 3-19 to show details of sporozoite, parasitophorous vacuole and the nearby intraepithelial lymphocyte.
(x 16800)

Figure 3-21. Sporozoite in intraepithelial lymphocyte
between two villous epithelial cells near
villar lamina propria at 6 hours post
infection. (x 7200)

Figure 3-22. Sporozoite in intraepithelial lymphocyte between villous epithelial cells at 6 hours post infection showing the irregularity of its plasma membrane and the cytoplasmic granule of these cells.
(x 4800)

Figure 3-23. Sporozoite in intraepithelial lymphocyte in the lower third of the villous lamina propria at 12 hours post infection. (x 7200)
